Mikroskopisk beskrivelse

- Urin

  Del af cellerne viser størrelsesvarierede uregelmæssige hyperkromatiske kerner, som giver mistanke om høj malignitetsgrad

- Skyllevæske

  Cellerig prøve. Del af cellerne viser størrelsesvarierede uregelmæssige kerner, som er malignitetssuspekte

Diagnose

Urin+ skyllevæske: Malignitetssuspekte celler

Efterfølgende undersøgelser

- Der fjernes flere blærepapillomer fra blærens bagvæg.

Mikroskopisk beskrivelse:

I alle biopsierne ses der papillære urotheliale tumorer, høj malignitetsgrad med grad III til IV kerner. Der ses ikke sikre tegn på invasiv vækst, således pTa.
